Decorative solutions, creative answers

AGC has developed a complete range of products and services so you can devote yourself fully to your projects with peace of mind. Explore all our ranges of glass products as well as our installation tools and accessories. And learn more about our services and networks that will support you and simplify your life.

All from the only partner you need: AGC.

OUR GLASS RANGES

Painted glass for decorative applications

Decorative painted glass inspires creativity and is perfectly suited to creating any ambience you desire, both indoors and out. In both matt and shiny finishes, it delivers an extraordinary palette of colours. Our teams can guide you through the latest trendy colours or help you create your very own custom colour.

COLOUR REINVENTING INTERIORS

Painted glass is an inexhaustible source of inspiration for decorating interiors. Just imagine the possibilities for a wardrobe, an office, a partition, a door or a bathtub surround. Painted glass, whether in a shiny or matt finish, combines perfectly with wood, stone and metal.

ADDING COLOUR OUTDOORS

AGC is the only manufacturer that offers toughened painted glass. While indoors it works wonders for shelves, splashbacks, kitchen counters, wall coverings and doors, outdoors it's ideal for shopfronts, commercial buildings, facade spandrels and partitions.

LACOBEL AND MATELAC

Lacobel and Matelac painted float glass products, available in a matt or shiny finish, offer endless possibilities for any interior design project. The new colours were chosen by the AGC Deco Academy, our European workshop that brought together for the first time a wide range of design professionals.

Lacobel shiny painted glass is available in 24 trendy colours so you can design and create the most beautiful living spaces. Matelac, its matt alter ego, is available in 15 colours. Anything goes: combine shiny and matt, play with different combinations of shades, juggle with contrast.

— LACOBEL T AND MATELAC T —

As the T in their name implies, Lacobel T and Matelac T are toughened painted glass products that add superb safety features to conventional Lacobel and Matelac. Since they're resistant to heat and thermal shock, they can be used for both indoor and outdoor applications, for example in a kitchen splashback behind a gas hob or in facade spandrels outdoors. These safe and strong glass products are available in 10 colours, delivering a beautiful, uniform appearance. Aesthetics and safety guaranteed.

Mirrors sparkling with quality

It seems like mirrors are everywhere... maybe because they're so dynamic and compelling. Mirrors have the power to enlarge any space, increase luminosity, enhance our surroundings and much, much more. Not only do they reflect our environment and our image, but they've also become essential and invaluable elements in architecture and decoration. Standard mirrors, premium mirrors, vintage mirrors and more: use our product ranges to take ownership of spaces and assert your creativity.

MIROX MNGE

Thanks to our many years of experience in manufacturing mirrors, our Mirox MNGE standard mirror is synonymous with high-quality mirrors around the world.

MIROX 4GREEN

AGC's high-end Mirox 4Green mirror is the perfect example of our never-ending quest to develop ever more environmentally friendly products. Mirox 4Green features lead-free paint. Its superb opacity makes it ideal for backlit applications.

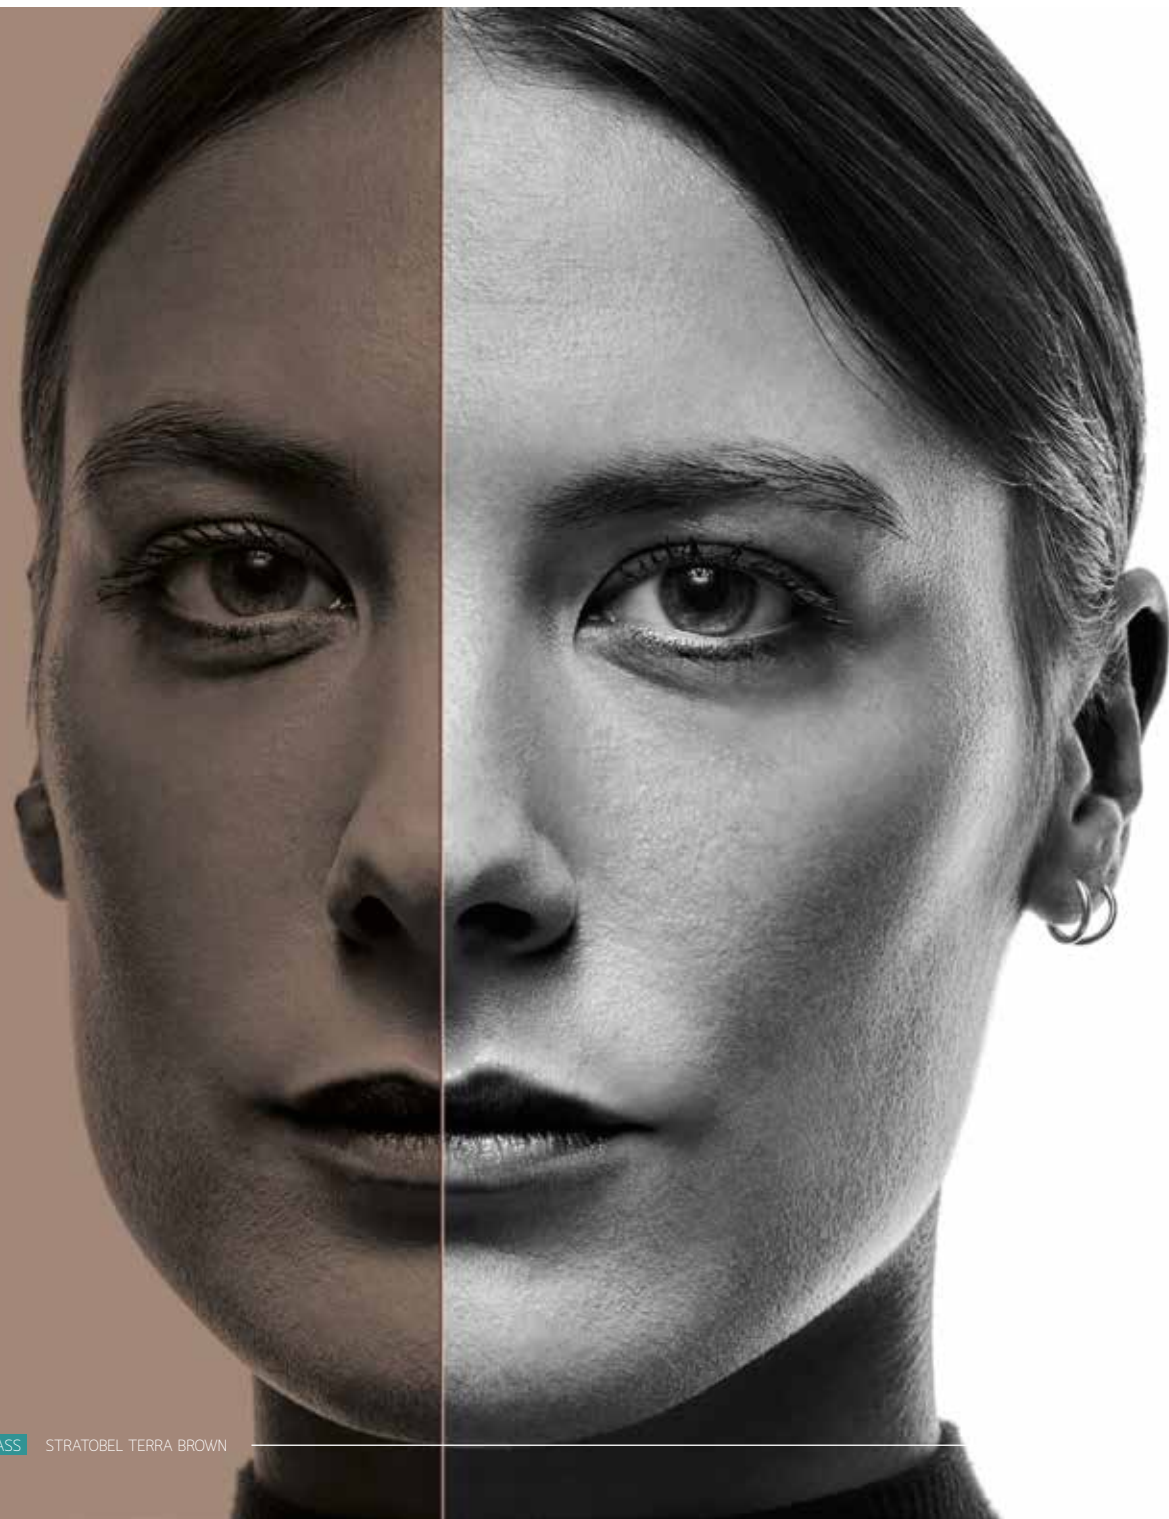

Mirox MNGE and Mirox 4Green are available in five colours, giving you the variety you need for any interior design project.

MIROLD MORENA

Mirolld Morena perfectly reflects current interior decoration trends. Its vintage look makes it the ideal solution for giving any space an old-time splendour.

Mirox MNGE and Mirolld Morena are Cradle to Cradle Certified™ Bronze and Mirox 4Green is Cradle to Cradle Certified™ Silver.

LAMINATED GLASS STRATOBEL TERRA BROWN

Coloured laminated glass

Can you guarantee safety without sacrificing style? Of course! Not only is laminated glass specially designed to keep people and property safe and secure, it also provides superb acoustic insulation – all while delivering the usual benefits of glass. Create the look you want by incorporating coloured PVB films to lend a special touch to a particular project. Whether used in doors, balustrades or partitions, every effort has been made to strike the perfect balance between design and safety, light and privacy – indoors and outdoors alike.

UNITED KINGDOM PARTITION AND BACKLIT WELCOME DESK, STRATOBEL SANDY BROWN

STRATOBEL COLOUR

The Stratobel Colour range of laminated safety glass offers eight classic colours inspired by nature. Combine films of the same colour to achieve the degree of opacity you want. Greys and browns add character to your projects while enhancing visual comfort and providing light. Combine multiple matt white PVB films to create the perfect solution for letting in light while protecting interiors from prying eyes. These coloured versions boast the same exceptional acoustic performance as our conventional laminated glass products while offering endless possibilities for any architectural and interior design project.

Satin-finish glass

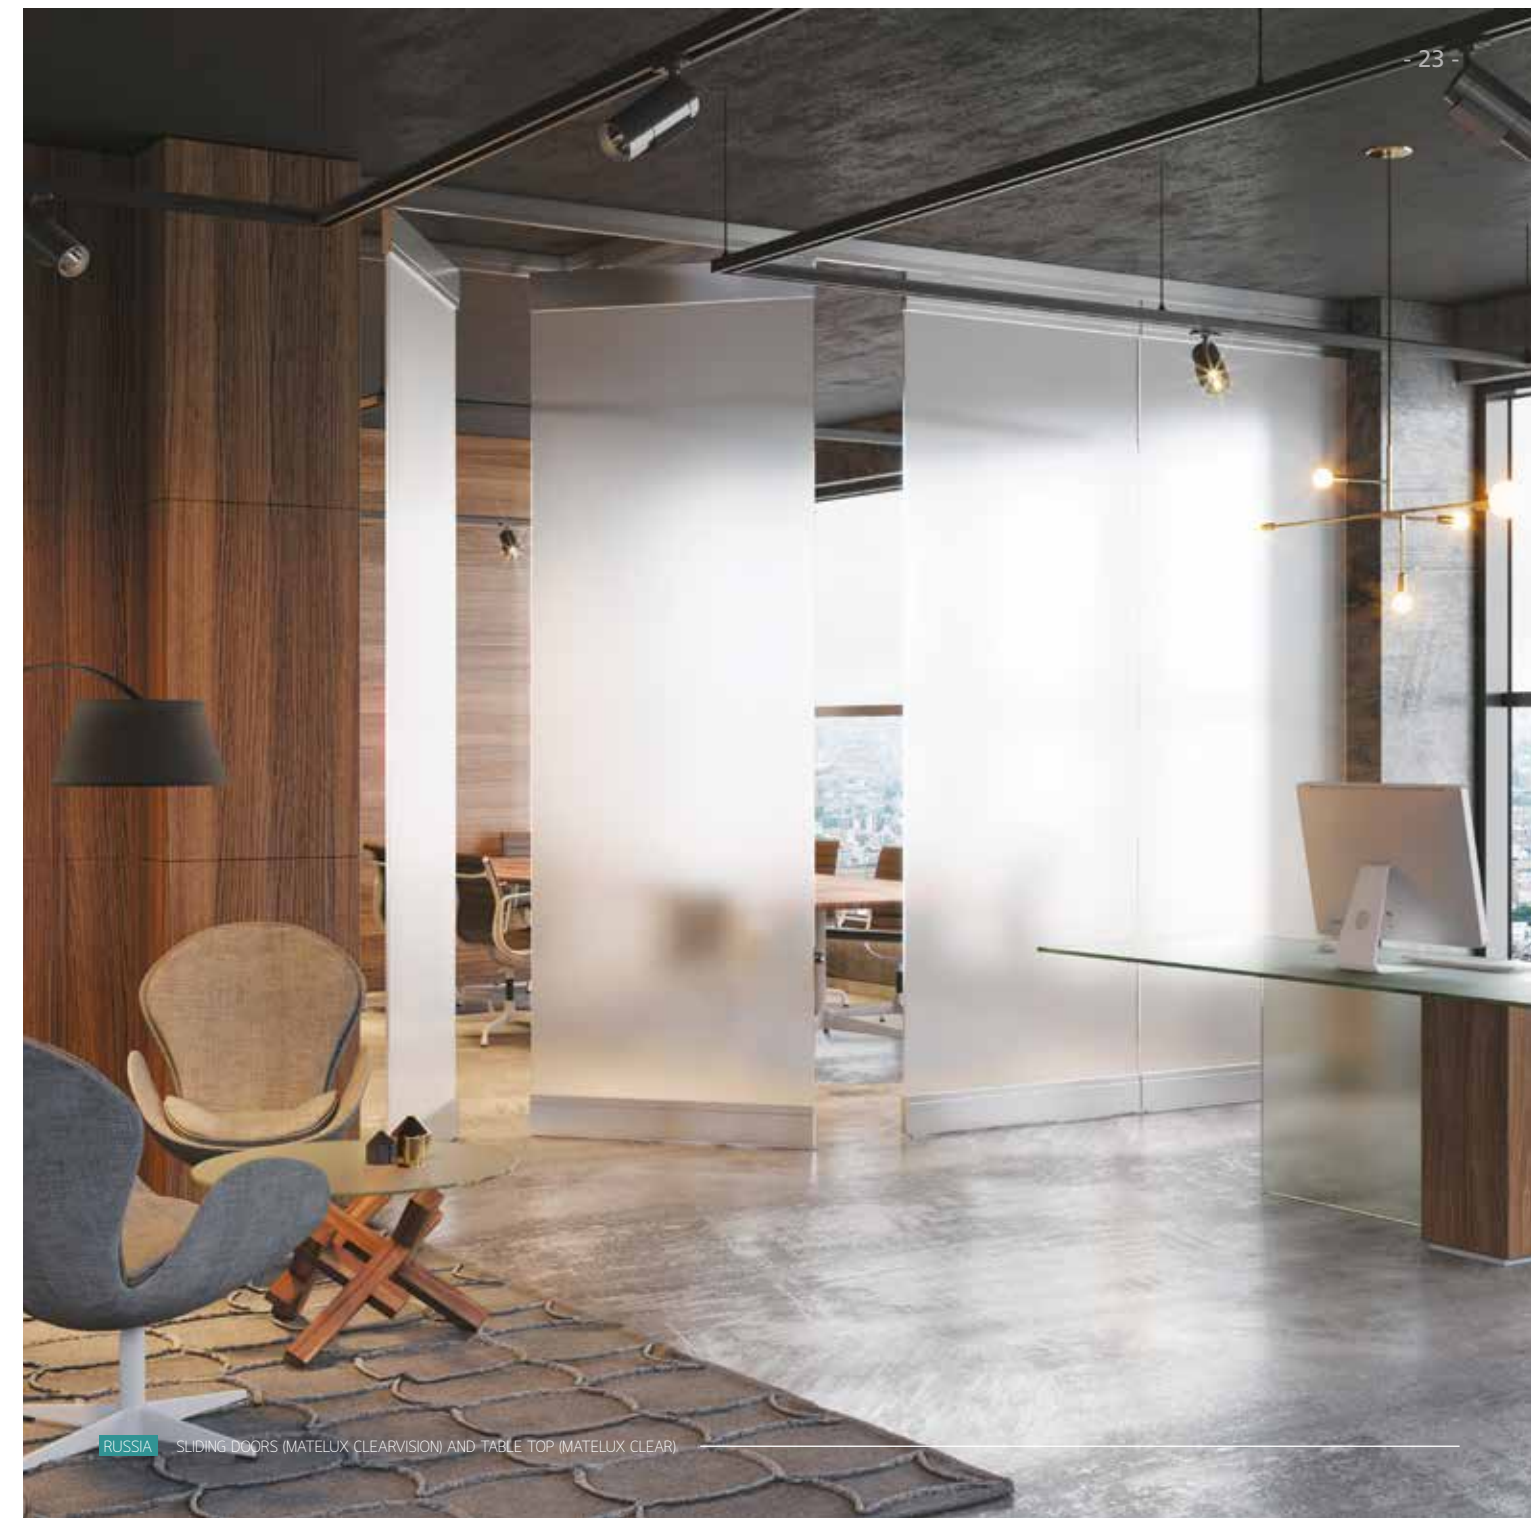

The promise of satin-finish glass is simple: let as much light as possible into living and working spaces while providing protection from prying eyes. AGC's tightly controlled acid-etching process delivers products that are uniform and stable. Satin-finish glass is also much easier to clean than sandblasted glass. This range of glass products is not only ideal for partitions, doors and furniture, but also for facades, floors and staircases.

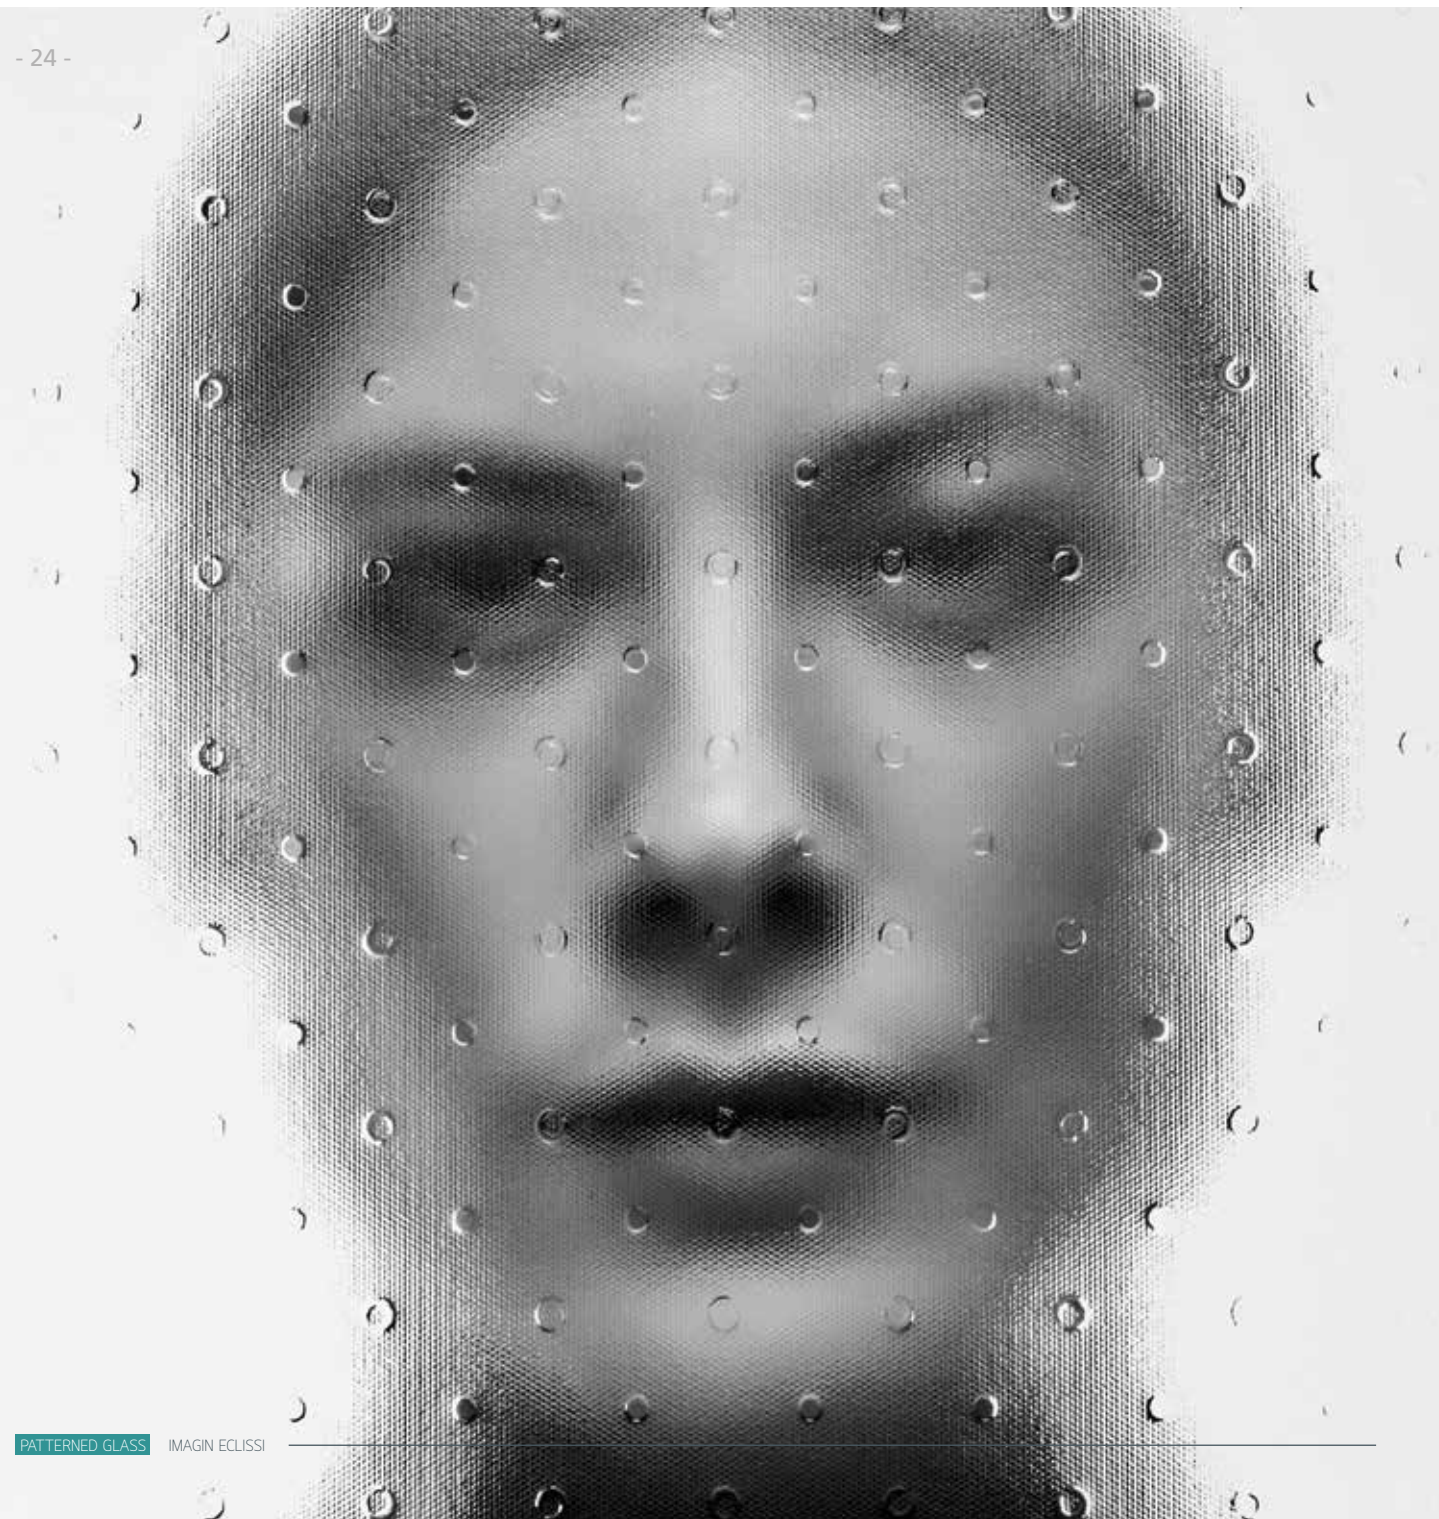

MATELUX

With its high-quality satin finish, Matelux strikes a subtle balance between letting light in and protecting your privacy. The Matelux range offers three clear versions and three coloured versions. Four additional options are also available: Matelux Light (slightly translucent), Matelux Double Sided (featuring a more pronounced level of opacity), Matelux Anti-slip (non-slip version) and Matelux Stopsol Supersilver Clear (the ideal product for combining with Stopsol Supersilver Clear glass).

Matelux can be processed like conventional float glass and its smooth satin finish makes it the ideal material for contemporary architecture.

Patterned glass

Patterned glass delivers an aesthetically pleasing solution while adding a unique decorative dimension to your projects. It's the perfect choice when looking for the right balance between translucence and privacy. Our wide range of patterns – ideal for facades, furniture, doors and interior partitions – are a dream come true for anyone who loves style and light, yet wants to protect their privacy.

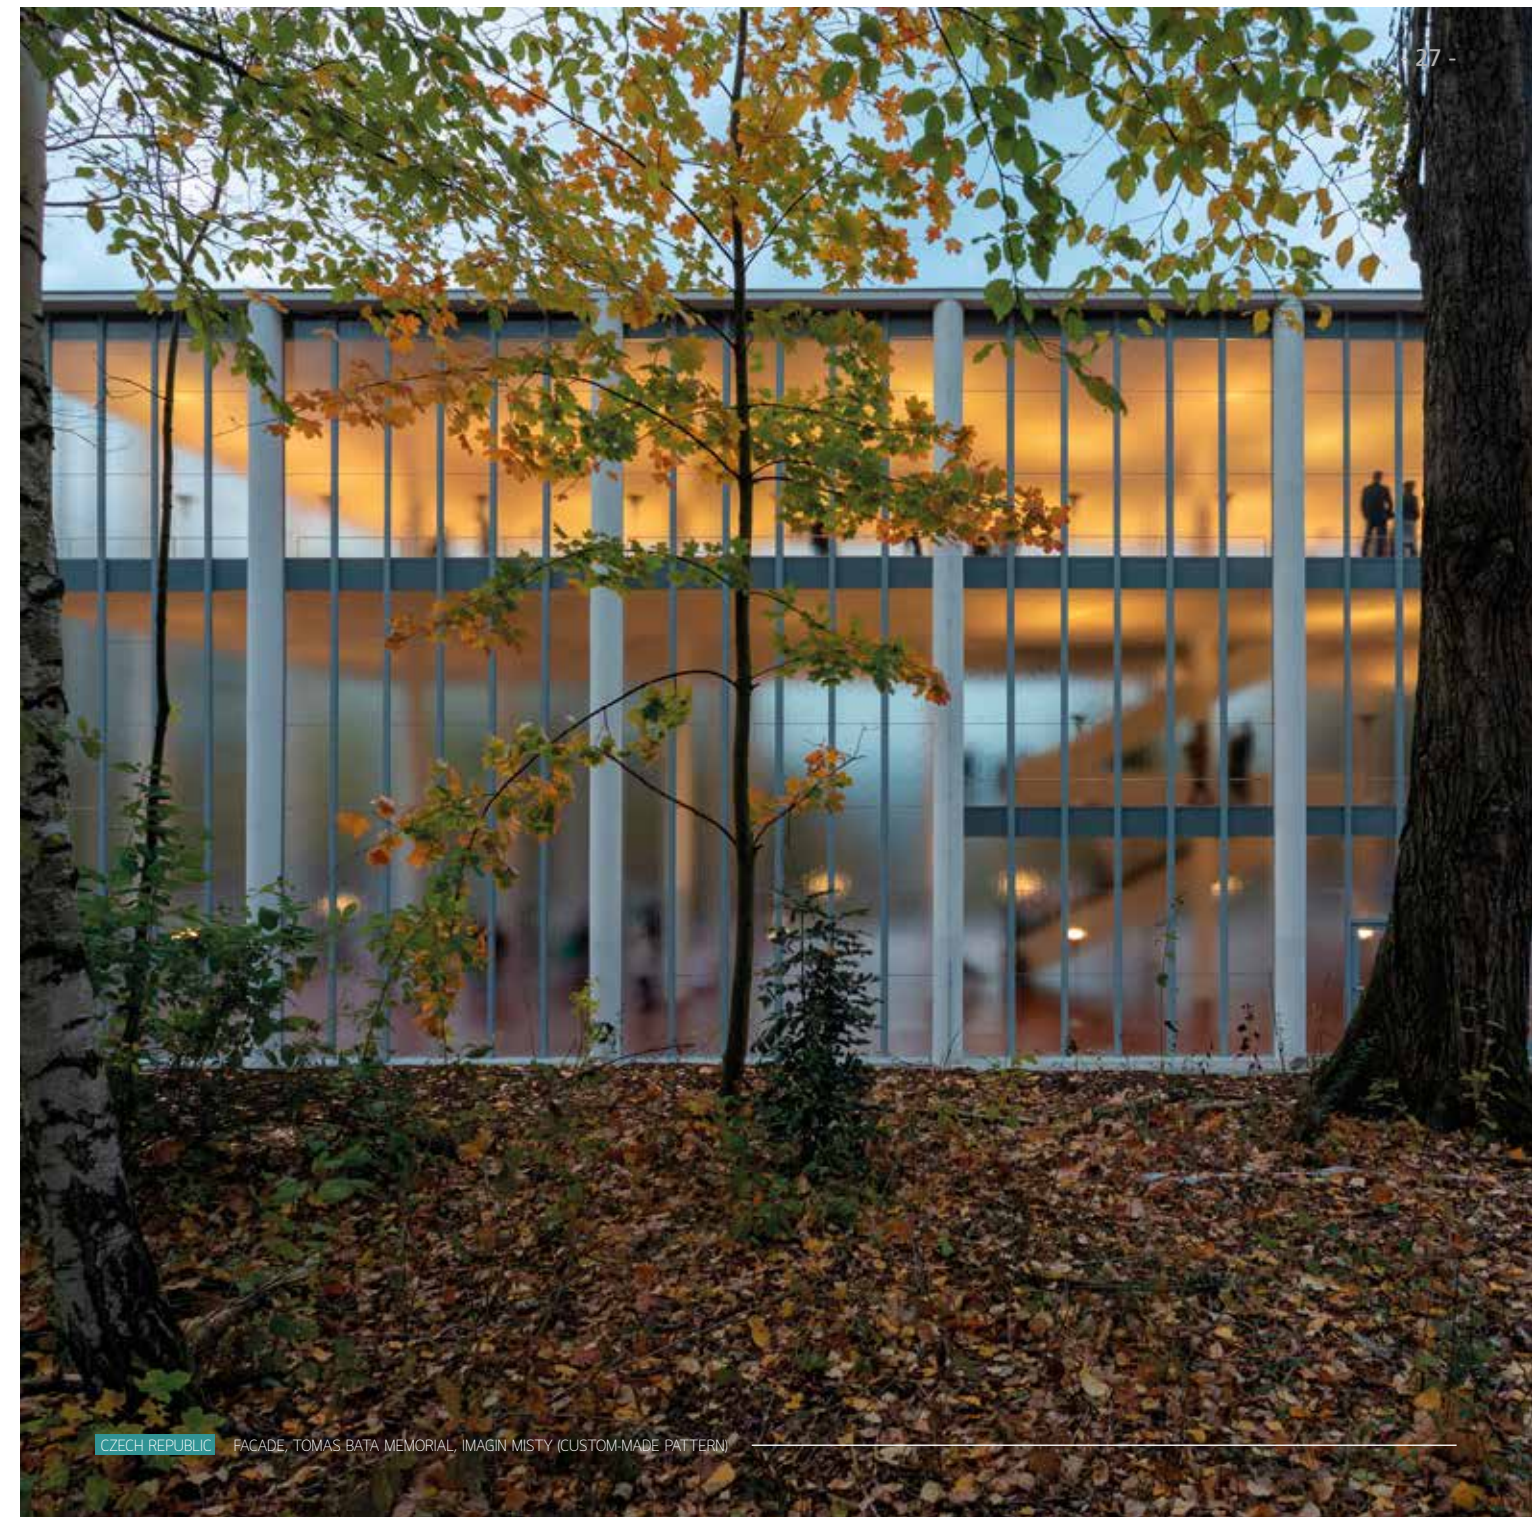

IMAGIN

With Imagin it's all about creativity and choice: nearly 30 standard patterns and more than 40 patterns on request. All of them available in a wide range of sizes and thicknesses. The degree of translucence and privacy is determined by both the structure and design of the pattern.

Imagin comes in three ranges:

- **Imagin Clear**
- **Imagin Sandblasted**
- **Imagin Wired**

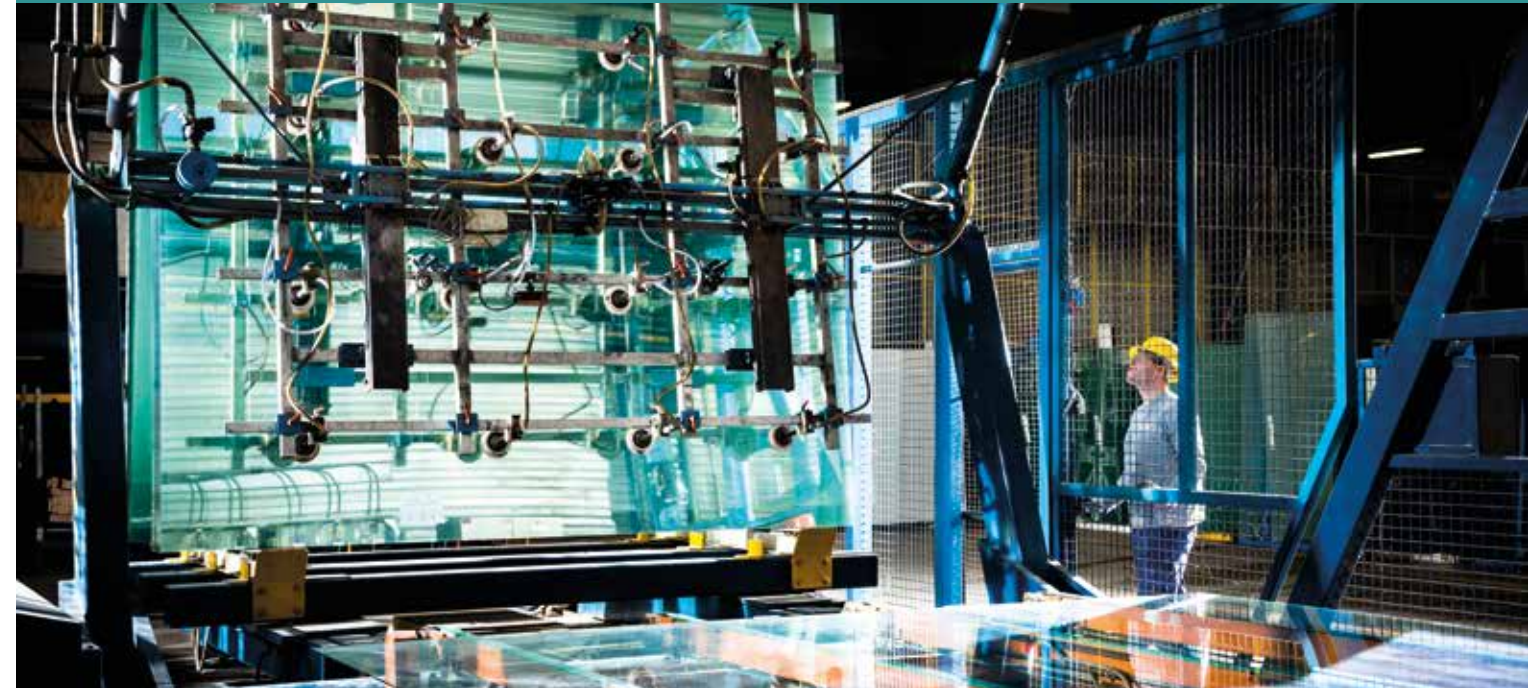

Beyond glass....

For your peace of mind when embarking on a project with AGC glass, we provide a wide range of options, services, guarantees and certifications:

- **MyColour, our custom colour service**
- **FIX-IN, our bonding and cleaning solutions**
- **Our solutions for safety and security glass**
- **Our tightly controlled industrial quality**
- **TAS, our technical support team**
- **Our certified processors**
- **Our distribution network**
- **Our AGC Deco Partners**
- **Our environmental certifications**

AGC has developed a complete range of products and services so you can devote yourself completely to your ideas and project with peace of mind and without wasting your precious time. At AGC, that's what we focus on.

OUR SERVICES AND CERTIFICATIONS

MyColour, our custom colour service

If you can't find the exact colour that matches your client's project in our Lacobel and Matelac painted glass ranges or our Stratobel Colour laminated glass range, then consider our exclusive MyColour* custom service to get the exact colour you need.

* **MyColour by Lacobel/Matelac:** this service is not available for transparent and metallic colours. Contact your AGC representative for more information. **MyColour by Stratobel** is available for any order of at least two packs, but the price depends on the quantity ordered.

How it works

1. Send your AGC representative the RAL or Pantone colour of your choice, or a sample of material (fabric, paper or any other medium).
2. AGC will send you a sample of glass in that colour.
3. If you're satisfied with the appearance of the sample, then you can place your order with your AGC representative.
4. Your order will be delivered within a few weeks.

Invisible bonding solution - guaranteed

FIX-IN

AGC developed the FIX-IN range of bonding products in collaboration with a specialist in the field to ensure the perfect installation and longevity of its products.

AGC guarantees that the paint on its painted glass products and mirrors is compatible with its FIX-IN bonding solutions (see the FIX-IN warranty for more details). The warranty is five years for Mirox, Lacobel and Matelac, and ten years for Lacobel T and Matelac T.

The range also includes touch-up paints to conceal small scratches in the paint on the glass as well as glass cleaning kits for an installation that is neat and tidy down to the smallest detail.

All these products and more are available from our online store: www.agc-store.com.

Safety and security: total protection

Every AGC decorative product range includes safety versions.

— SAFE+, THE ANTI-SPLINTER FILM —

A transparent polypropylene SAFE+ film can be applied to the painted side of AGC painted glass and mirrors to deliver enhanced safety.

The SAFE+ film has two benefits. If the glass is broken, the shards adhere to the film, preventing injury. It also protects the painted side of the glass from scratching. Our painted glass products with a SAFE+ film comply with standard EN 12600.

— STRATOBEL —

Our Stratobel laminated safety glass delivers differing levels of protection depending on the product. It can provide protection from injury, from falling through the glass, as well as from break-ins and vandalism.

Stratobel consists of two sheets of glass sandwiching one or more PVB (polyvinyl butyral) interlayers. The level of protection depends on the thickness of each sheet of glass and the number of PVB interlayers.

Industrial quality, simply essential

Delivering exceptional quality is one of AGC's key objectives.

This is one area where we don't stint on resources. We count on the experts at our European Research Centre and on the rigorous quality controls at our plants. Our industrial processes guarantee you consistent and uniformly high quality.

TAS, your technical support team

TAS – our Technical Advisory Service – is staffed by our glass experts. Simply contact your AGC representative and he or she will put you in touch with TAS. They will be happy to help you with any complex technical questions you might have about our products.

Our certified processors, an invaluable guarantee

Your project deserves the very best. That's why we strongly recommend that Lacobel T and Matelac T painted glass be processed by one of our AGC certified processors.

From their initial training to the certification audit, nothing is left to chance – ensuring you receive top-quality processed glass. Our certified processors are supported by our Technical Advisory Service (TAS). You can find the complete list of certified processors on www.agc-yourglass.com

Our distribution network

AGC has a local distribution network across Europe to facilitate access to its range of decorative glass products for all construction and decoration professionals, regardless of the size of their company or the nature of their project.

Our AGC Deco partners

In 2021 AGC launched a network of decorative glass experts, called the AGC Deco partners. The aim of this network is to consolidate the expertise on our decorative products among our customers and to facilitate access to our range of products to their own clients.

AGC CERTIFIED PROCESSORS GLASS EXITING FROM THE TOUGHENING FURNACE AFTER HEAT-TREATMENT

Environment and sustainability: our commitment to you and your projects

AGC makes every effort to guarantee the sustainability of your projects.

The Cradle to Cradle Certified™ programme evaluates a product's sustainability throughout its entire lifecycle. AGC was the first glassmaker to go through this process and we now have the largest portfolio of Cradle to Cradle Certified™ glass products. In fact, our entire decorative range is certified*.

In addition, most of our products have an Environmental Product Declaration (EPD). You can see our EPDs on: www.agc-yourglass.com.

Lastly, several of our products can help improve your ranking in building environmental certification programmes such as LEED® (Leadership in Energy & Environmental Design) and BREEAM® (Building Research Establishment Environmental Assessment Method).

*The certification level is mentioned next to each product in this brochure.
